

THINKING ABOUT A CAREER IN GEOGRAPHY?

TEACHER

Educating the generations

Want to follow in your teacher's footsteps? Share your geographical expertise with students and inspire their curiosity with the world. Equip them with an understanding of the Earth's key physical and human processes, as well as the world's places, people, resources and natural and human environments.

GEOTECHNICAL ENGINEER

Planning ahead

A geotechnical engineer plans and designs the structures for major construction projects like buildings, roads, embankments and canals. It's up to you to look at the geological hazards of soil and rock, underground water and site and structural conditions to make sure the engineering work is good to go!

CARTOGRAPHER

Map it out

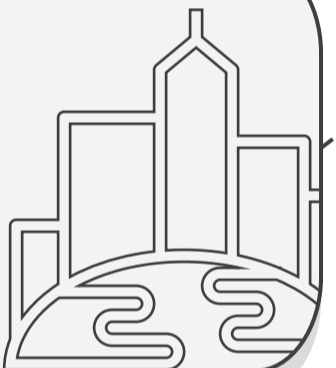

From military maps and geological charts to everyday maps detailing roads and footpaths, a cartographer measures, analyses and interprets geographical information to survey the land and turn all that nitty gritty data into visual charts and maps.

TOWN PLANNER

Build a city

Ever played SimCity? Managing and developing cities, towns, villages and the countryside, town planners balance the needs of the environment, the local economy and the local population to discover innovative ways to make our environment a better place to live.

ENVIRONMENTAL CONSULTANT

Make a difference

Armed with a passion for protecting our surroundings, environmental consultants provide expert assessment and advice to reduce the harmful impacts of industrial, commercial and government schemes on the environment. These guys are like the superheroes of green living.

CONSERVATION OFFICER

Protect the outdoors

This is one for lovers of the great outdoors! Responsible for ensuring the conservation and sustainable use of natural resources and environments, conservation officers help to protect the UK's areas of natural beauty.
