

Task 6: Vehicle Survey

Depending on the **time** of the **year** (and the **weather** conditions), there should be plenty of **visitors/tourists** around the village of **Leysin**. In order to try to gauge the **extent** of the **tourist/resort function** of **Leysin**, a **car/ car park survey** can be quite revealing. The results can show the **sphere of influence** of **Leysin** i.e. the distances **visitors/tourists** travel to visit **Leysin**.

- Your teacher(s) will **brief** you about **what** exactly it is that you have to do and **where** about the tasks should be done. Each group may be given a different area of Leysin to survey.
- Always **seek permission** from the **car park attendant** if there is one on duty. An "introductory note" is given below to show to the "**gardien de parking**" should this be necessary:-

A l'Attention du Gardien de Parking

Ces élèves Britanniques sont en Suisse pour faire des études de Géographie. Ils recueillent des données concernant les véhicules garés dans le parking de Leysin dans le cadre de leurs études. Ils ont reçu des consignes quant à leur comportement, et vont recueillir les informations nécessaires aussi vite que possible en causant le moins de problèmes possible. J'espère que ceci est acceptable

Je vous remercie de votre compréhension et coopération.

- Basically, you will **either** be looking at the **registration plates** of **parked cars and/or** you will be doing similar for **cars passing you by** as you move around the village.
- Ignore** all **Swiss** registered vehicles!
- Use the following **recording table** (figure 14) to **gather your data** by using **tally marks**:-

Type of Vehicle	French	Dutch	German	Belgian	British	Italian	All Others
Car							
Camper Van							
Coach							
Motorbike							
Bicycle							
Other							
TOTALS =
